

■ What is JavaScript?

JavaScript (JS) is a programming language used to make websites interactive.

■ HTML gives structure

■ CSS gives design

■ JavaScript gives brain (logic + interaction)

■ What does JavaScript do?

JavaScript can perform many tasks on a website:

- Run actions when a button is clicked
- Form validation (e.g., check if passwords match)
- Create sliders, popups, animations
- Fetch data from servers using APIs
- Create games and web applications
